## HYDRAULICS

Navtec hydraulic systems offer precise control and a significant sailing advantage for racers and cruisers. Whether your boat is a Grand Prix race yacht or a 200 foot superyacht, Navtec hydraulic systems can be customized to meet your exact requirements.

### A370 Hydraulic Integral Backstay Adjuster

Ergonomics meets economics. The new Navtec Series 9 Integral incorporates several key design features while keeping to the high marine standard that Navtec is known for. The Series 9 design moves the hydraulic feed tube inside to give the unit a sleek look. The pump piston size has been increased to  $\frac{1}{2}$ " to increase flow, which produces the faster action need for today's modern mast. The integral is designed to be used with the integral Toggle. Available with a black or a clear finish.

PART NUMBER	MAX PULL FORCE @ RELIEF		LENGTH CLOSED		LENGTH OPEN		WEIGHT		MAX WIRE SIZE	
	lbs	kg	in	mm	in	mm	lbs	kg	in	mm
A370-BLE-006	3,500	1,590	31,1	790	44,6	1133	7	3,18	7/32	5,6

A370-BLE-022	3/4	19	3/4	19,1				

The A370 is supplied as standard with a black finish. To order a clear finish, please replace the -BLE in the part number with -CLE. Integral Backstay Adjuster assembly includes handle, clevis pins and bushings (-6)

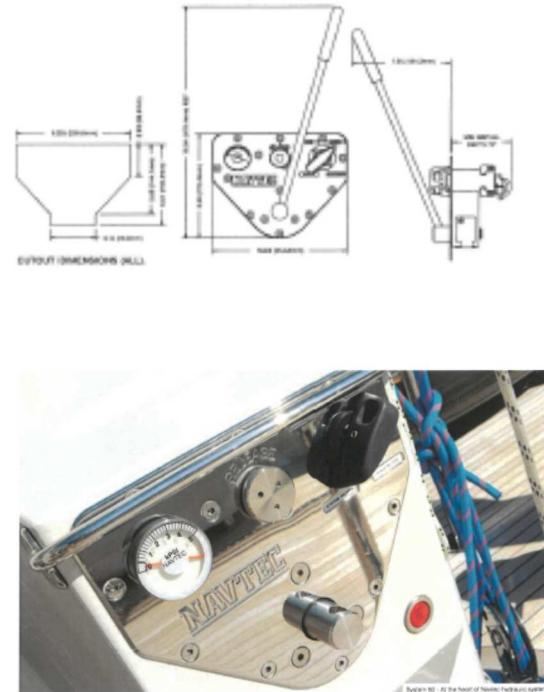

- Max relief setting is 4.000 psi, except for -6 and -12, which are 3.000 psi
- \*\* -12 & -17 Cylinders use the A371-20A17A toggle

# NAVTEC FRANCE

## System 50 Hydraulic Panel

The System 50 Hydraulic Panel is at the heart of a Navtec hydraulic system, putting the operator in complete control of up to four functions, including halyards, Cunningham, mast jack, traveler, vang, backstay or outhaul functions. System 50 is designed to meet the changing requirements of racing and cruising yachts in the 35 to 70 foot LOA range.

- Ease of operation. Controlled flow, gradual release valve.
- High speed: Faster flow rate = faster response.
- Optional auto-shift pump. Two-speed pump offers high volume and the pump functions with adjustable shift pressure.
- Power interface. Leading winch powerpacks can interface with, and be accurately controlled by, the System 50.
- Protection. Relief valve provides immediate pressure release for the selected function.
- Finish. Black anodized or stainless steel.
- Reservoir. The standard on a single function is a two-quart reservoir, with the four-quart capacity as standard on a multifunction panel.

PART NUMBER	DESCRIPTION	MIN. INSTALLATION DEPTH "D"		WEIGHT	
		in	mm	lbs	kg
A320-SF-01	Single-function, single speed pump	3,75	95,30	10,10	4,58
A320-SF-02	Single-function, 2 speed auto-Shift pump	5,50	139,70	10,80	4,90
A320-MF-01	Multi-function, single speed pump	4,50	114,30	13,00	5,90
A320-MF-02	Multi-function, 2 speed auto-Shift pump	5,50	139,70	13,70	6,21
A320-SF4-01	Single function, single speed pump, with 4-way valve*	5,50	139,70	14,30	6,50
A320-SMC-01	Single to multi-function conversion kit	N/A	N/A	2,00	0,91

System 50 assembly includes pump, handle, valves, reservoir, hose and in-line filter.

For stainless steel faceplate option, add(S) to end of any above part number. Example: A320-SF-01S. Add 1.3 lbs above assembly weights.

Multi-function panels can be used to control 1, 2, 3 or 4 hydraulic functions.

The 2-speeds Auto Shift pump supplies 300 %more flow at low pressure.

Single-function panel assemblies include a quart molded reservoir. Multi-function panels include a 4 quart reservoir.

\*4-way valve is to control double-acting (push-pull) cylinders.

# NAVTEC FRANCE

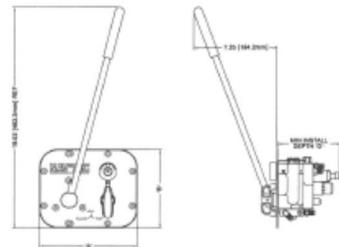

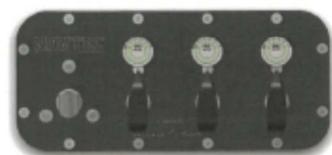

## System VIII Hydraulic panel Specifications

The system VIII panel incorporates cam valve technology developed by Navtec. Cam valves make the System VIII easier to use and more durable at higher pressures than other systems. This is why the new System VIII panel is an ideal choice for Grand Prix race yachts and Super Yachts, which demand the highest level of performance available.

The System VIII offers improved design aesthetics and the same configuration offered in the System VII panels. The cam valve are sculpted to save weight and space. Each output has its own valve and gauge to monitor the function that it is controlling, and a relief valve that can be set individually. Flow control can be added to each valve by simply inserting flow control needles into the outlet of each valve.

The System VIII panels can be easily integrated with powered units provides by Navtec, Lewmar, winch manufacturers, or custom ship designers.

System VIII panels come in multiple configurations. Standard panels come with a hard-coated aluminum fact place. Stainless steel panels are also available.

System VIII assembly and specified weights include auto-shift, handle, valves, 4-quart molded reservoir, hose and in-line filter unless otherwise indicated.

For stainless steel faceplate option, add(S) to end of any above part number. Example: A380SL00-01

Right-hand pump configuration available. Change (L) to ® in any above part number. Example: A380-R00-01

Other custom configurations available.

For cutout dimensions, subtract 1.50 in (38.1mm) from panel dimensions.

- 4-way valve is to control double-acting (push-pull) cylinders

- \*\* does not include reservoir, filter or hose

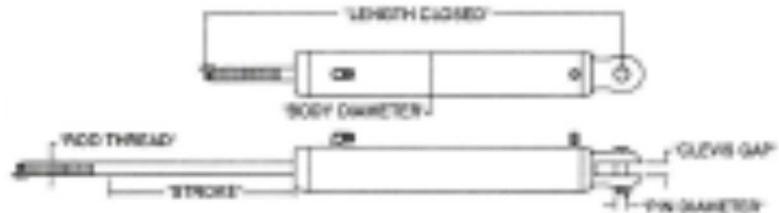

- \*\*\* Does not include reservoir or filter

# NAVTEC FRANCE

## Hydraulic Cylinders

Minimal weight. Minimal windage. Maximum reliability. Navtec standard cylinder rods are made from 316 stainless steel. Tubes, lower clevis and caps are made of black hard-coated aluminum. Cylinder bores are specially polished for longer seal life. Navtec stainless steel cylinders represent the highest standard of performance worldwide, with 316 stainless construction throughout. Standard, Long, and Flattering Reef versions are available. Titanium componentry optional.

## A260 Mechanical Lock Hydraulic Cylinder specifications

The Mechanical Lock allows the release of hydraulic pressure on the backstay cylinder while maintaining tension. However, there is no relief valve protection, as backstay tension is mechanically locked, not hydraulically controlled. This is useful for extended passages.

## Cylinder Terminals

### H120 Fixed Clevis

The H120 Screws onto the cylinder piston rod, but does not provide length adjustment.

### J100 Eye / Jax Toggle

Used at the lower end of the cylinder to prevent excessive side loads.

Frequently used on the backstay and inner forestay cylinders.

## A254 Hydraulic Traveler Cylinders

Navtec double rod cylinders were engineered and designed by Navtec for use in dual pull application, usually with a block and tackle incorporated. Navtec originally engineered these cylinders as a solution to operate mainsheet travelers. They are also commonly used to operate genoa lead systems as well as many custom applications. Navtec will work with any marine hardware manufacturer to provide a cylinder that interfaces with their hardware to operate any double acting needs.

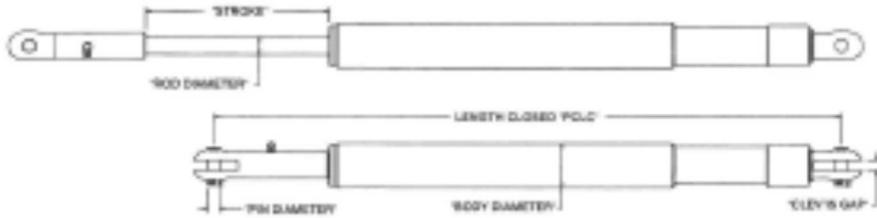

CYLINDER SIZE	CAP THREAD	ZERO STROKE LENGTH		WEIGHT STD ALUMINUM	
		in	mm	lbs + lbs/in stroke	kg + kg/cm stroke

-76	3 3/4-16	22,9	582	27,2 + 1,0	12,36 + .17
-90	4 3/8-8	32,7	830	44,3 + 1,5	20,10 + .27
-110	4 7/8-8	33,2	843	64,8 + 1,7	29,39 + .30
-150	5 3/8-8	35,2	895	89,6 + 2,6	40,65 + .47

Max relief setting is 5,000 psi. See HP cylinder information for all other technical data. Cylinders are designed on an individual basis. Specify desired stroke when ordering. Overall cylinder length equals zero stroke length plus two times the desired stroke.

# NAVTEC FRANCE

## A850 Hydraulic Vang Cylinder

Navtec's Series 850 Vang features an extra-large piston rod to resist buckling with no tackle to clutter the deck layout. It also provides boom lift in light airs and acts as a topping lift when the sail is flaked. The A850 can be integrated with an A440 Push Button Quick Release Valve, proving the ability to instantaneously dump the vang when required.

## Position-Indicating Vang Electrical

Originally developed for super yachts, this unique feature is now available on all Navtec vangs down to -22. The position indicating unit is essential for achieving the correct angle for the new furling booms that have become common on boats from 50 feet and up. The Position Indicating Vang can be interfaced with most marine electronics.

CABLE LENGTH		78,74	200

## A950 Hydraulic Super Yacht Vang (Carbon)

The Navtec Carbon Fiber Superyacht Vang delivers the same performance, reliability, and quality that owners and designers have come to rely on from the Aluminum and Stainless Steel models, but with a substantial weight saving. The longer the vang, the larger the weight saving, resulting in an easier vang to install and maintain.

PART NUMBER Carbon P/P PI	STROKE		AVAILABLE PCLC		AVAILABLE PCLC	
	in	mm	MIN in	mm	MAX in	mm

A950-PI-PP-400	20,67	525,0	114	2896	300	7620

- Substantial weight saving over Aluminum and Stainless Steel Models
- Seamless, tapered, one-piece tube
- Smaller overall diameter than Aluminum and Stainless Steel models
- Carbon fiber weave or bespoke painted finish
- Available with push/pull or gas return options
- Position indicating feature available on request
- Both hydraulic connections for push/pull vang in oil jaw
- Custom clevis designs available for streamline connections

# NAVTEC FRANCE

## A850 Hydraulic Super Yacht Vang (alloy)

The Navtec Alloy Hydraulic Superyacht Vang features a coaxial feed through the rod so both the push and pull hydraulic connections are located on the oil jaw. In addition, the A850 vang can be equipped with the position indication function, to ensure that the correct angle for the furling boom is achieved.

## Carbon Wrap Cylinders

The Navtec Carbon Wrap Cylinder complements the style aesthetic of the A950 Carbon Fiber Superyacht Vang. A thin carbon veneer tube is applied to an A250 Cylinder resulting in the same carbon finish as the larger superyacht vang. For the specification of the A250 cylinder, including the pull force, pin size, and rod size, please see pages 4-5.

# NAVTEC FRANCE

## Race Hydraulics

The Navtec Grand Prix hydraulic systems are designed to operate at pressures up to 7500 psi. Enjoying long standing relationships with multiple America's Cup winners, as well as high performance race fleets that include the Volvo Round The World Race and TP52s, the Navtec Grand Prix hydraulic Systems have a proven track record in performance excellence.

### Autoshift 7/8 Bore Hand Pump

Developed with America's Cup teams, the Navtec Autoshift 7/8 bore hand Pump provides a lightweight pump with increased flow. The latest version of the Navtec race pumps increases the size of the large bore pistons to 7/8" and the small bore pistons to 1/2", providing the maximum flow required for Grand Prix racing. Excess material is sculpted away, ensuring that the pump is as light as possible. Coupled with the A384 Race Valve, the Autoshift 7/8 Bore hand Pump is at the heart of Navtec race hydraulic systems.

### A634 Rotary Autoshift Pump

The A634 Rotary Autoshift Pump is the latest in the Navtec line of rotary pumps. The A634 is the ideal choice for the manual hydraulic system on Grand Prix race yachts with a pedestal winch system. The pump can be integrated with a Lewmar and Harken light-weight carbon pedestal system, providing an ergonomic way of producing the high flow rates needed to operate cylinders in the racing environment. Manufactured from high strength alloy with extra material sculpted away to achieve the lightest pump possible, the Navtec

	WEIGHT		INSTALLATION DIMENSIONS				OUTPUT FLOW*

## A384 7500psi Valves

---

### Standard Light Cam Valve

The Navtec Light CAM3-position valve is the standard valve for use with a single acting M cylinder. Each manifold-mounted 7500psi unit has an adjustable pressure relief valve, an optional flow control valve, and a non-interconnect check valve. The check valve is designed to prevent interconnection between two open valves which are controlling different cylinders. Excess material has been meticulously sculpted from the valve blocks, resulting in an incredibly lightweight solution. An optional flow control limits the cylinder release rate without restricting the pumping flow, resulting in a slow release rather than shock loading the rig. This is ideal for checkstay and jumper strut cylinders.

### Light 4-Way CAM Valve

The Navtec light 4-way CAM valve is designed to operate the double-acting cylinders typically used in traveler, lead puller, centerboard, and push/pull applications. The unit includes separately adjustable relief and flow control valves.

## M CYLINDERS

---

The Navtec ultra-light, custom 7500 psi M Cylinder delivers maximum muscle where it is needed most on the world's top racing yachts. The standard on TP52s, IRC designs, and high-performance race yachts, the M Cylinder has helped drive America's Cup class winners since 1992.

By designing a cylinder that operates at 7500 psi rather than the standard 5000 psi or the heavier 10,000 psi, Navtec have improved the hydraulic working performance. Higher pressure results in faster performance alongside a reduction in size and weight. Machined from one long bar with an integral cylinder end fitting, weight has been reduced by eliminating the need for a mechanical end fitting. Eliminating the need for seals at the cylinder end has reduced the overall length. Machining the cylinder from a solid bar means that an unlimited number of end fittings can be incorporated, including clevis, jaw, eye, lashing eye, and threaded.

For the America's Cup yachts, the Navtec cylinder is machined from a high-strength 7000 series aluminum material, while a more marine stable 6000 series aluminum is used for grand prix race yachts where longer life span is required. While the 6000 series aluminum increases the weight of the cylinder by approximately 6 %, the life span increases from 2-3 years to 6-8 years without compromising on performance.

The M Series Cylinder integrates with the Navtec 7500 psi Valve, providing a sophisticated hydraulic system that delivers the highest level of performance.

## M Series Vang

The M Series Vang incorporates an M Series Cylinder with a carbon fiber / Kevlar extension tube to produce a unit that operates in the same way as the Navtec light Vangs. The standard version uses an internal tie rod to carry the tension loads, while a gas-charged option is available where return pressure is required. Removing the tie rod reduces weight, with the carbon/Kevlar tube carrying both the tension and compression loads. In this instance, the tube is glued permanently to the cylinder and the clevis. The Navtec M52 Vang is suitable for use in predominately light sailing conditions, while the Navtec M64 Vang is suitable for use on larger boats where the loads are higher.

## A440 Push Button Quick Release Valve

The Navtec “Panic Button” has proven to be a popular component of a hydraulic vang system. By locating the Quick Release Valve away from the central control panel, the crew has control of the vang release from any desired position on the boat. Easy to operate, the valve is only released when the button is held down, meaning that it cannot be left open. Available with different plunger lengths for different panel thicknesses, the valve is easy to mount and watertight. When a hydraulic vang is integrated with a Quick Release Valve and a -6 hose, it achieves the responsiveness of a mechanical vang with the added benefit of the additional mechanical performance gained from a hydraulic system. The Push Button Quick Release Valve can be used with a hydraulic outhaul.
